PROFESSIONAL SUMMARY

B.Tech Computer Science & Engineering (Cyber Security) graduate from **JNTU Hyderabad (7.67 CGPA, 2026)**. International competition winner at the Indo-Dutch Cyber Security School (IDCSS25) for a NATO Summit threat-landscape challenge. Developed validated, hands-on competencies across **Digital Forensics & Incident Response (DFIR), VAPT, and SOC operations** within **simulated enterprise lab environments**, including engineering *PhishGuard*, an ML-based phishing detection system with 94% accuracy. Deeply skilled in network defense, incident response, and applied cryptography with a strong self-directed learning track record and a security-first, detail-oriented mindset. Seeking an entry-level role as a **Security/SOC Analyst, Junior Penetration Tester, Cyber Security/Threat Research, or DFIR Engineer**.

CORE TECHNICAL SKILLS

Operating Systems: Linux (Kali, Ubuntu/Debian), Windows, Active Directory, VMware

Vulnerability Assessment & Penetration Testing: Kali Linux, Nessus, OpenVAS, Burp Suite, OWASP ZAP, Nikto, CVE-based Exploitation, Web Application Assessment, Penetration Testing Methodology (Internal/External)

Security Monitoring & Network Analysis: Wireshark, Tcpdump, Nmap, Nagios, SIEM Fundamentals, IDS/IPS Configuration

Digital Forensics & Incident Response (DFIR): FTK Imager, Autopsy, NetworkMiner, Foxton Forensics, Crowd Response, Memory (RAM) Forensics, Disk Imaging, Registry & Browser History Analysis, EDB/MBOX Analysis

Network Defense & Attack Vectors: TCP/IP, DNS, HTTP/S, CCNA (Routing, Switching, Enterprise Networks), ARP/DNS Poisoning & Spoofing Detection

Threat Intelligence & Application Security: MITRE ATT&CK Framework, TTP Identification, IOC Analysis, Threat Hunting Fundamentals, OSINT, SQL Injection & XSS Testing/Mitigation

Programming & Automation: Python (Security Automation)

EDUCATION

B.Tech, Computer Science & Engineering (Cyber Security)

Sumathi Reddy Institute of Technology for Women - Affiliated to JNTU Hyderabad

2022 - June 2026

CGPA: 7.67 / 10

12th Grade - 82%

Delhi Public School, Warangal (CBSE Board)

HANDS-ON LAB TRAINING (B.TECH CURRICULUM)

- Vulnerability Assessment & Web Penetration Testing Lab:** Executed comprehensive internal/external penetration testing and web application security assessments across target lab environments mapping directly to OWASP Guidelines. Leveraged Nessus, OpenVAS, Burp Suite, Nikto, and OWASP ZAP for host/service discovery, network traffic monitoring, vulnerability scanning, and manual testing (including XSS, SQLi, and CVE-based exploitation). Identified and documented critical security flaws, delivering professional-grade remediation reports that achieved a 30% improvement in the target systems' overall security posture.
- Digital Forensics & Incident Response Investigations Lab:** Conducted end-to-end investigations and forensics on disk images and network artifacts under standard evidence-handling protocols. Utilized FTK Imager for rigorous bit-stream imaging and Autopsy / NetworkMiner to perform deep-dive forensics across email footprints, browser/registry hives, mobile data, and system memory (RAM). Successfully isolated malware persistence mechanisms, established definitive timelines of compromise, and compiled forensic reports detailing attacker footprints.
- Network Security Analysis & Threat Mitigation Lab:** Intercepted and scrutinized live network traffic infrastructure to proactively detect malicious activity, operational anomalies, and routing inefficiencies. Deployed Wireshark and Nmap for deep-packet protocol analysis, traffic baseline monitoring, and aggressive OS/host network mapping.

KEY PROJECT

PhishGuard - Real-Time Phishing & Threat Detection System | Personal Project

Python, Flask, Machine Learning (Random Forest, Logistic Regression, TF-IDF), SQLite

- Built an enterprise-style phishing/URL threat-detection platform, analyzing 1,000+ URLs with heuristic and ML-based classification, achieving 94% detection accuracy.
- Implemented REST APIs for automated threat scanning and database-backed detection history, supporting 100+ concurrent users.
- Investigated malicious indicators and attack patterns to generate risk-based alerts, with correlation logic transferable to Threat Intelligence Platform (TIP) data enrichment.

INTERNATIONAL COMPETITION - CYBERSECURITY RESEARCH

Winner - Challenge 3: Digital Threat Landscape for a NATO Summit

Indo-Dutch Cyber Security School 2025 (IDCSS25)

Oct-Nov 2025

Joint initiative of The Hague Centre for Strategic Studies, Cybersecurity Centre of Excellence, DSCI, Government of Telangana & the Netherlands Embassy in India

- **Threat Actor Profiling:** Profiled state-sponsored Advanced Persistent Threats (APTs), cybercrime syndicates, hacktivists, and insider threats by mapping their explicit motivations, attack methodologies, and systemic risk levels for a live NATO Summit simulation.
- **MITRE ATT&CK Mapping:** Mapped three attack scenarios (espionage, disruption, and influence operations) to specific TTPs (spear-phishing, supply-chain compromise, DDoS, radio/mesh jamming, deepfakes) in a MITRE ATT&CK-style framework.
- **Attack Surface Analysis:** Conducted comprehensive attack-surface analysis across government IT infrastructure, telecom backbones, electrical power grids, and delegate endpoints to pinpoint critical infrastructure vulnerabilities.
- **Defensive Architecture Design:** Engineered risk-distribution models and formalized defensive countermeasures, including Zero-Trust Architecture (ZTA), threat-intelligence sharing protocols, and supply-chain vetting strategies.
- **Strategic Deliverables:** Authored a structured, professional-grade threat intelligence research report and delivered a technical video presentation, earning 1st Place / Winning Submission honors across the international cohort.

CERTIFICATIONS & CONTINUED LEARNING

- **Google:** Google Cybersecurity Professional Certificate
- **Cisco:** Junior Cybersecurity Analyst, Introduction to Cybersecurity, CCNA (Routing, Switching, Enterprise Networks), Python Essentials 1 & 2, Networking Essentials, Cisco Learn-A-Thon 2025
- **Indo-Dutch Cyber Security School (IDCSS25):** Professional Development Track (20+ Advanced Modules across Ransomware, DFIR, Threat Analysis, & OT Security)
- **Enterprise Job Simulations:**
 - Tata Group: Cybersecurity Analyst Job Simulation (Forge platform)
 - Deloitte Australia: Cyber Security Job Simulation (Forge platform)

ACHIEVEMENTS

- **Winner:** Digital Threat Landscape for a NATO Summit (Indo-Dutch Cyber Security School 2025)
- **Semi-Finalist:** Hack-A-Tone 2025 (GydeXP × ARIES IIT Delhi)
- **Participant:** Highly Selective Engineering Innovation Hackathon (Adobe India Hackathon 2025)

PROFESSIONAL COMPETENCIES & SOFT SKILLS

- **Analytical & Correlation Depth:** Strong critical thinking and meticulous attention to detail when correlating disparate malicious artifacts, forensic indicators, and system logs.
- **Technical Documentation:** Adept at translating complex technical findings into structured security reports, executive summaries, and mitigation advisories.
- **Stakeholder Communication:** Proven capability to articulate clear threat risks and technical concepts to both technical staff and non-technical business stakeholders.
- **Agility & Collaboration:** Fast, self-directed learner who integrates smoothly into cross-functional teams and operates comfortably alongside senior leadership.
